

EMEP Centres Joint Report for HELCOM
EMEP/MSC-W TECHNICAL REPORT 3/2005

**Atmospheric Supply of
Nitrogen, Lead, Cadmium, Mercury and Lindane
to the Baltic Sea in 2003**

Preface

The Co-operative Program for Monitoring and Evaluation of the Long-Range Transmission of Air Pollutants in Europe (EMEP) and the Baltic Marine Environment Protection Commission (HELCOM) are both conducting work on air monitoring, modelling and compilation of emission inventories. In 1995, HELCOM decided to rationalize its current programs by avoiding duplication of efforts with specialised international organizations. At the request of HELCOM, the steering Body of EMEP at its nineteenth session agreed to assume the management of atmospheric monitoring data, the preparation of air emission inventories and the modelling of air pollution in the Baltic region.

Following the coordination meeting held in Potsdam in Germany and the Pollution Load Input meeting held in Klajpeda-Joudkrante in Lithuania, both 1996, it was agreed that EMEP Centres should be responsible for regular evaluation of the state of the atmosphere in the Baltic Sea region and should produce an annual joint summary report which includes updated emissions of selected air pollution, modelled deposition fields, allocation budgets and measurement data.

This report was prepared for the HELCOM, based on model estimates and monitoring results presented to the twenty-ninth session of the Steering Body of EMEP. Following decision of the HELCOM /MONAS-7 Meeting, it presents the results for the year 2003.

Acknowledgements

The authors are indebted to the scientific teams at MSC-E, MSC-W and CCC for providing the results included in this.

We are most grateful to Marina Varygina, Ilia Ilyin and Victor Shatalov from MSC-E, and to Heiko Klein, Vigdis Vestreng and Per Helmer Skaali from MSC-W for their help in preparation of this report.

Contents

Preface.....	iii
Acknowledgements.....	iv
Contents	v
1. Executive Summary	1
2. Introduction.....	7
3. Observed Concentrations of Nitrogen, Cadmium, Lead, Mercury and Lindane at HELCOM Stations in 2003.....	9
3.1 HELCOM measurement stations.....	9
3.2 Nitrogen concentrations in air	11
3.3 Nitrogen in precipitation.....	13
3.4 Heavy metals in the air	15
3.5 Heavy metals in precipitation.....	17
3.6 Lindane (γ -HCH)	19
3.7 Laboratory and field intercomparisons.....	20
3.7.1 Nitrogen.....	20
3.7.2 Heavy metals	20
3.7.3 Lindane (γ -HCH).....	21
4. Atmospheric Supply of Nitrogen to the Baltic Sea in 2003	23
4.1 Nitrogen emissions	23
4.2 Annual deposition of nitrogen	30
4.3 Monthly depositions of nitrogen	34
4.4 Source allocation of nitrogen deposition	37
4.5 Comparison of model results with measurements.....	39
4.5.1 Air concentrations	40
4.5.2 Concentrations in precipitation	44
4.5.3 Concluding remarks	44
5. Atmospheric Supply of Lead to the Baltic Sea in 2003.....	49
5.1 Lead emissions	49
5.2 Annual deposition of lead.....	51
5.3 Monthly depositions of lead	53
5.4 Source allocation of lead deposition.....	53
5.5 Comparison of model results with measurements.....	56

6. Atmospheric Supply of Cadmium to the Baltic Sea in 2003	65
6.1 Cadmium emissions.....	65
6.2 Annual deposition of Cadmium.....	67
6.3 Monthly depositions of lead	69
6.4 Source allocation of lead deposition.....	69
6.5 Comparison of model results with measurements.....	72
7. Atmospheric Supply of Mercury to the Baltic Sea in 2003	81
7.1 Mercury emissions.....	81
7.2 Annual deposition of mercury	83
7.3 Monthly depositions of mercury	85
7.4 Source allocation of mercury deposition.....	85
7.5 Comparison of model results with measurements.....	88
8. Atmospheric Supply of Lindane to the Baltic Sea in 2003	91
8.1 Lindane emissions	91
8.2 Annual deposition of lindane	93
8.3 Monthly depositions of lindane	94
8.4 Comparison of model results with measurements.....	95
9. Conclusions	99
